5. Bias Detection Details

This section explains why bias penalties were applied. Votes are considered biased when a voter gives a rank that doesn't match what the majority of voters gave. Majority is determined by the most frequently assigned ranks.

Voter	Recipient	Given Rank	Expected Rank	Majority Rank	Majority Score	Bias Detected
ADITHYA	HARSHITHA	1 (2 pts)	2	2	[1]	Yes
ADITHYA	KARTHIKEYAN	2 (1 pts)	1	1	[2]	Yes
KARTHIKEYAN	HARISH KHARTHIK	2 (2 pts)	2	2	[1]	Yes
VAITHEESWARAN	KARTHIKEYAN	2 (1 pts)	1	1	[2]	Yes

How Bias is Determined:

Bias is detected when a voter gives a rank that doesn't match what the majority of voters gave: 1. For each recipient, we collect all ranks they received from different voters 2. We identify the most commonly assigned rank(s) - these become the 'majority ranks' 3. Any voter who assigned a different rank than the majority is considered to have given a biased vote 4. Each voter who gave biased votes receives a penalty of 0.00 points This approach helps identify outlier votes that differ from the consensus of the group.
